DailyBloom – Abeykoon A M H M

Description:

DailyBloom is an Android-based wellness application developed to promote personal wellbeing through structured habit management, mood tracking, and hydration monitoring. Designed as part of an academic project, the application integrates behavioral psychology principles with modern mobile development practices to support users in establishing sustainable, healthy routines.

The primary objective of DailyBloom is to provide users with an engaging platform to cultivate consistency in daily wellness activities while fostering emotional awareness and balanced living. The app achieves this through a combination of interactive features that collectively address different dimensions of personal health, physical, emotional, and behavioral.

From a technical standpoint, DailyBloom is built using Android Studio and Kotlin, following modular architecture with Activities and Fragments to ensure smooth navigation between screens such as Habits, Mood Journal, and Settings. The application employs Shared Preferences for data persistence, allowing the secure storage of user preferences and wellness data without relying on external databases. Additionally, it supports both portrait and landscape orientations with a responsive interface adaptable to various screen sizes.

The design emphasizes user-centered interaction, featuring a clean and accessible UI that enhances engagement and usability. The development process incorporated iterative testing, optimization of UI components, and careful attention to state management to preserve user data and app stability.

DailyBloom comprises three core functional modules:

- **Daily Habit Tracker** - Enables users to add, edit, and delete personalized wellness habits (e.g:exercise, meditation, hydration). It visually tracks completion progress and encourages consistency through intuitive progress indicators.
- **Mood Journal with Emoji Selector** - Allows users to record their daily moods with emojis and timestamps, offering insight into emotional patterns through historical mood entries.
- **Hydration Reminder** - Utilizes Android's notification mechanisms (AlarmManager/WorkManager) to send timely reminders, ensuring adequate daily water intake.

- App Logo with Slogan
